CCAG (Crown Cap Angle Gauge) –
ANGLE INDICATOR FOR CROWN CAP

The aim of this unit is to make a fast and accurate test of the angle α (see photo above).

CALIBRE – GO NO GO FOR CROWN CAPS

This template is used to check the setting of the crown after the filling operation for both regular and intermediate crowns. Other formats are available.

CODG - GAUGE FOR OUTSIDE DIAMETER OF CROWN CAPS

The aim of this unit is to test whether the outside diameter of the crown cover is correct or not. Judgment of reference: the crown must adapt to the larger hole, while the crowns must not adapt to the small hole.

CIDG - INSIDE DIAMETER GAUGE FOR CROWN CAPS

The aim of this unit is to test whether the internal diameter of the crown cover is correct or not. Judgment of reference: the small end must adapt to the internal cycle of the crown, while the larger end should not adapt to the internal cycle of the crown.
